Student Workbook

Student Workbook — Magic Squares — Bhadragaṇita (Senior)

This workbook is yours to write in. Use it for vocab, exercises, and reflection across all 10 days.

Vocabulary tracker

Fill in as we go:

- *bhadra-gaṇita* — _____
- *siddhāṅka* (modern coinage) — _____
- *kothumi vidhi* — _____

Day-by-day notes

Day 1 — Discover the 3×3

What I learned:

One question I have:

Day 2 — The Magic Constant

What I learned:

One question I have:

Day 3 — How Many 3×3 Magic Squares?

What I learned:

One question I have:

Day 4 — Stair-Step Method (Nārāyaṇa)

What I learned:

One question I have:

Day 5 — Practice — 5×5 and 7×7

What I learned:

One question I have:

Day 6 — 4×4 and the Khajuraho Square

What I learned:

One question I have:

Day 7 — Historical Context — Nārāyaṇa and Predecessors

What I learned:

One question I have:

Day 8 — Cross-Cultural — Lo Shu and Dürer

What I learned:

One question I have:

Day 9 — Design Your Own

What I learned:

One question I have:

Day 10 — Final Share and Assessment

What I learned:

One question I have:

Final reflection

After Day 10, write a paragraph: what is the most important thing you learned in this module?

Day 1 — Discover the 3×3

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: build the unique 3×3 magic square with 1–9 by trial.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See lesson-plan.md for any day-specific materials)

Vocabulary introduced today

- *bhadra-gaṇita* (IAST: bhadra-gaṇita; lit. “auspicious arithmetic” — the Indian term for magic squares)

Primary source (today’s reading)

From *Nārāyaṇa Paṇḍita* — see `sources.md`.

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **The challenge.** “*Place the numbers 1 through 9 in a 3×3 grid so that every row, every column, and both main diagonals sum to the same number.*” Hand out blank grids. 8 minutes of trial.

2. **Most students will find the same answer.**

2	7	6
9	5	1
4	3	8

(Or one of its 7 symmetric variants — rotations and reflections.)

3. **The magic constant.** Each row, column, and diagonal sums to **15**. Verify on the board.
4. **Why 15?** Sum of $1+2+\dots+9 = 45$. Divided across 3 rows = 15. The magic constant is forced by the digit sum.

5. **Source.** This 3×3 square appears in *Gaṇita-kaumudī* of Nārāyaṇa Paṇḍita (1356 CE), but is also found in the Chinese *Lo Shu* tradition (~5th–10th c. BCE attestation, legends earlier). The 3×3 is one of the most studied combinatorial objects in mathematics.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today's slice: focus on the part of the activity that reinforces Discover the 3×3 .

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See [homework.md](#) for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 2 — The Magic Constant

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: derive why 3×3 with 1–9 must sum to 15 per row.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See [lesson-plan.md](#) for any day-specific materials)

Vocabulary introduced today

- *siddhāṅka* (*modern coinage*) (IAST: *siddhāṅka* (*modern coinage*); lit. “the common sum of all rows/columns/diagonals”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **The formula.** For an $n \times n$ magic square using 1 through n^2 , the magic constant is $M = n(n^2 + 1) / 2$.
2. **Verify for 3×3 .** $M = 3 \times 10 / 2 = 15$. ✓
3. **Derive.**
 - Total sum of 1 through $n^2 = n^2(n^2 + 1) / 2$.
 - This sum spreads across n rows, so each row sums to $(n^2(n^2 + 1) / 2) / n = n(n^2 + 1) / 2$.
4. **Predict.** What’s M for 4×4 ? 5×5 ? 7×7 ?
 - 4×4 : $4 \times 17 / 2 = 34$.
 - 5×5 : $5 \times 26 / 2 = 65$.
 - 7×7 : $7 \times 50 / 2 = 175$.
5. **Source.** Nārāyaṇa Paṇḍita’s *Gaṇita-kaumudī* (1356 CE), Book 14, derives the magic constant formula. Earlier references in Tibetan, Chinese, and Arab traditions also give the formula.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces The Magic Constant.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See [homework.md](#) for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 3 — How Many 3×3 Magic Squares?

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: count the equivalence classes (up to symmetry).

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See lesson-plan.md for any day-specific materials)

Vocabulary introduced today

- *kothumi vidhi* (IAST: kothumi vidhi; lit. “Nārāyaṇa’s algorithm for odd-order squares”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **How many 3×3 magic squares are there?** Counting carefully:
 - 1 fundamentally different square (up to symmetry).
 - 8 squares including rotations ($\times 4$) and reflections ($\times 2$).
2. **Demonstrate the symmetries.** Start with 2-7-6 / 9-5-1 / 4-3-8. Rotate $90^\circ \rightarrow$ 4-9-2 / 3-5-7 / 8-1-6. Rotate again $\rightarrow$ 8-3-4 / 1-5-9 / 6-7-2. Etc. Also reflect.
3. **Define “essentially different.”** Two squares are equivalent if one is obtained from the other by rotation or reflection. The count of essentially distinct $n\times n$ magic squares is one of the harder combinatorial problems.
4. **Higher orders.** Number of essentially-different magic squares: 1 (for $n=3$), 880 ($n=4$), ~ 275 million ($n=5$). Source: combinatorial computer enumeration (Frenicle, Schinzel).
5. **Class exercise.** Each pair writes out all 8 symmetric variants of the 3×3 from Day 1. Verify each is still a magic square.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces How Many 3×3 Magic Squares?.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See [homework.md](#) for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 4 — Stair-Step Method (Nārāyaṇa)

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: apply nārāyaṇa’s algorithm to build a 5×5 square.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See [lesson-plan.md](#) for any day-specific materials)

Vocabulary introduced today

- *bhadra-gaṇita* (IAST: bhadra-gaṇita; lit. “auspicious arithmetic” — the Indian term for magic squares)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **State Nārāyaṇa Paṇḍita's algorithm.** For any ODD $n \times n$, follow these steps:
 - Step 1: Place 1 in the top-middle cell.
 - Step 2: From the cell with k , move one up and one right (diagonal) to place $k+1$.
 - Step 3: If you go off the top, wrap to the bottom (same column you'd have landed in).
 - Step 4: If you go off the right, wrap to the left (same row).
 - Step 5: If the target cell is occupied, place $k+1$ in the cell DIRECTLY BELOW the cell containing k instead.
2. **Demonstrate on 3×3 .** Place 1 top-middle. Move up-right (wraps to bottom row, same column shift) $\rightarrow$ 2 goes bottom-right. Continue:

8	1	6
3	5	7
4	9	2

Verify: rows, columns, diagonals all = 15. ✓ (Note: this is a different symmetric variant of the 3×3 magic square than yesterday's.)

3. **Source.** Nārāyaṇa Paṇḍita's *Gaṇita-kaumudī* (1356 CE), Book 14 (*Bhadra-gaṇita*). He calls this method *turagagati* — “horse-step” (knight-like move).
4. **Cross-cultural.** The same method was independently discovered or transmitted in Arabic and European mathematics. The earliest extant Indian description is Nārāyaṇa's.
5. **Try on your own.** Each student applies the algorithm to construct another 3×3 magic square. Tomorrow we extend to 5×5 .

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today's slice: focus on the part of the activity that reinforces Stair-Step Method (Nārāyaṇa).

Wrap-up (5 min)

- One-sentence exit ticket: “What's one thing you learned today?”
- Preview tomorrow.

Homework

(See [homework.md](#) for today's task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 pañcabhūta).

Day 5 — Practice — 5×5 and 7×7

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: use the method on multiple odd-order squares.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See lesson-plan.md for any day-specific materials)

Vocabulary introduced today

- *siddhāṅka* (modern coinage) (IAST: siddhāṅka (modern coinage); lit. “the common sum of all rows/columns/diagonals”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **5×5 construction.** Place 1 in cell (1, 3) [top-middle]. Apply the stair-step rule. Resulting square (one variant):

17	24	1	8	15
23	5	7	14	16
4	6	13	20	22
10	12	19	21	3
11	18	25	2	9

Magic constant: $5 \times 26 / 2 = 65$. Verify any row, column, or diagonal.

2. **7×7 construction (challenge).** Same algorithm, larger grid. Magic constant: $7 \times 50 / 2 = 175$.
3. **Common mistakes.** Forgetting the “if cell occupied, drop down” rule. Wrong wrap direction. Off-by-one starting position.

4. **Source check.** Nārāyaṇa’s text gives this algorithm for any odd n . Modern translations: T. Hayashi, J. Pereira’s edition of *Gaṇita-kaumudī*.
5. **Independent practice.** Each student builds a 5×5 unaided. Pair-check. Then a 7×7 if time permits.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces Practice — 5×5 and 7×7 .

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See [homework.md](#) for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 6 — 4×4 and the Khajuraho Square

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: examine the khajuraho inscription and its panel-magic property.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See [lesson-plan.md](#) for any day-specific materials)

Vocabulary introduced today

- *kothumi vidhi* (IAST: kothumi vidhi; lit. “Nārāyaṇa’s algorithm for odd-order squares”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **The 4×4 (even-order) case.** Stair-step doesn’t directly work for even n . Different methods exist (Strachey method, Conway’s LUX). Magic constant for 4×4 with 1–16: **34**.
2. **The Dürer 4×4 (1514).** Famous engraving “Melencolia I” includes a 4×4 magic square:

16	3	2	13
5	10	11	8
9	6	7	12
4	15	14	1

All rows, columns, diagonals = 34. The bottom-middle two cells contain “15 14” — the year of the engraving (1514). Famous detail.

3. **The Khajuraho square (~10th c. CE).** Inscribed on a panel at the Khajuraho temple complex (Madhya Pradesh, India). 4×4 grid. ALL rows, columns, diagonals AND many 2×2 subblocks sum to **34**. This is a *pan-diagonal* (or *most-perfect*) magic square — a stronger condition than ordinary magic.

7	12	1	14
2	13	8	11
16	3	10	5
9	6	15	4

Compute: row 1 = $7+12+1+14 = 34$. Column 1 = $7+2+16+9 = 34$. Etc. Also 2×2 block top-left = $7+12+2+13 = 34$.

4. **Source.** The Khajuraho inscription is real and dateable (~10th–11th c. CE). Discussion: this PRECEDES Dürer by ~500 years. The temple inscription is one of the oldest extant magic squares with this “most-perfect” property.
5. **Honest framing.** Magic squares appear in many cultures. The KHAJURAHOS square’s “most-perfect” property is distinctive. Not all Indian magic squares are this advanced; not all advanced ones are Indian. Cross-cultural mathematics flourishes.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces 4×4 and the Khajuraho Square.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”

- Preview tomorrow.

Homework

(See `homework.md` for today's task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 7 — Historical Context — Nārāyaṇa and Predecessors

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: place *gaṇita-kaumudī* in 14th c. indian math.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See `lesson-plan.md` for any day-specific materials)

Vocabulary introduced today

- *bhadra-gaṇita* (IAST: *bhadra-gaṇita*; lit. ““auspicious arithmetic” — the Indian term for magic squares”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **Nārāyaṇa Paṇḍita (b. 1340 CE).** Mathematician of the Mādhava school period. His *Gaṇita-kaumudī* (“Moonlight of Computation”) is a major mathematical compendium. Book 14 (*Bhadra-gaṇita*) is dedicated to magic squares.

2. **Earlier Indian references.** Garga Samhitā (~1st c. BCE) mentions magic squares for ritual. The Khajuraho inscription (~10th c. CE) predates Nārāyaṇa by 4 centuries.
3. **Pre-Nārāyaṇa global timeline.**
 - Lo Shu legend (Chinese, attested ~5th–10th c. BCE): a 3×3 magic square.
 - Ibn Khaldūn and earlier Arab mathematicians: 9th–14th c. CE work on magic squares.
 - Khajuraho (~10th c. CE): pan-diagonal 4×4 .
 - Nārāyaṇa (1356 CE): systematic algorithms for any odd n .
 - Dürer (1514 CE): Melencolia I.
4. **Source.** Kim Plofker, *Mathematics in India* (Princeton, 2009), ch. 5 — best modern academic overview.
5. **Critical-thinking close.** “*Magic squares appear independently in many cultures. What does this tell us about (a) mathematical universality and (b) cultural transmission? Nārāyaṇa’s contribution: ALGORITHMS for any odd n — a systematisation. Khajuraho’s contribution: ART + math at temple scale.*”

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces Historical Context — Nārāyaṇa and Predecessors.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See `homework.md` for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 pañcabhūta).

Day 8 — Cross-Cultural — Lo Shu and Dürer

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: compare indian, chinese (lo shu), and european (dürer 1514) magic squares.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See lesson-plan.md for any day-specific materials)

Vocabulary introduced today

- *siddhāṅka* (modern coinage) (IAST: siddhāṅka (modern coinage); lit. “the common sum of all rows/columns/diagonals”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **The Lo Shu (Chinese).** Legendary: a turtle emerging from the River Lo bore the 3×3 magic square on its shell. Used in Chinese geomancy (*feng shui*). Earliest definite attestation: ~5th c. BCE (though legend places it ~2000 BCE).
2. **Indian — Khajuraho (10th c. CE).** As yesterday. Pan-diagonal 4×4 with “most-perfect” property.
3. **Indian — Nārāyaṇa Paṇḍita (1356 CE).** Systematic algorithms for any odd n .
4. **European — Dürer’s Melencolia I (1514).** A 4×4 with year-encoding.
5. **Class exercise.** Students draw a timeline (~–500 to ~+1600) marking each tradition’s main contributions. Then write one sentence: “*What does this timeline tell us about mathematical universality?*”

Critical-thinking caveat: “*Some claims of priority are unprovable. The TURTLE-LEGEND for Lo Shu is just that — a legend. We can only date things by extant manuscripts and inscriptions.*”

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces Cross-Cultural — Lo Shu and Dürer.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See `homework.md` for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 *pañcabhūta*).

Day 9 — Design Your Own

Module: Magic Squares — Bhadragaṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: create a personalised 4×4 or 5×5 magic square as visual art.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See `lesson-plan.md` for any day-specific materials)

Vocabulary introduced today

- *kothumi vidhi* (IAST: kothumi vidhi; lit. “Nārāyaṇa’s algorithm for odd-order squares”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **Personal magic-square design.** Each student designs ONE magic square. Options:

- 3×3 with custom numbers (e.g. start from 5 instead of 1; magic constant changes accordingly).
 - 4×4 using Nārāyaṇa-style or Strachey method.
 - 5×5 using stair-step.
2. **Artistic treatment.** Calligraphy, colour-coding, geometric decoration. Inspired by mandala / yantra aesthetics or modernist grid art.
 3. **Document the math.** Each student writes on the back: starting numbers, magic constant, method used, source reference. This is a “math behind the art” supplement.
 4. **Source-anchoring.** Each student cites at least ONE source from this module (Nārāyaṇa, Khajuraho, Dürer, Plofker, etc.).
 5. **Pair-critique.** Pairs swap; verify each other’s math correctness.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see [activities/](#)). Today’s slice: focus on the part of the activity that reinforces Design Your Own.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See [homework.md](#) for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 pañcabhūta).

Day 10 — Final Share and Assessment

Module: Magic Squares — Bhadrageṇita · **Band:** Senior · **Time:** 45 min

Learning objective

By the end of this lesson, students will: present design + summative quiz.

Materials

- Whiteboard / chart paper
- Notebook, pen per student
- (See `lesson-plan.md` for any day-specific materials)

Vocabulary introduced today

- *bhadra-gaṇita* (IAST: bhadra-gaṇita; lit. ““auspicious arithmetic” — the Indian term for magic squares”)

Lesson flow

Warm-up (5 min)

- Daily check-in: one-sentence response to “*What’s one thing you remember about yesterday’s lesson?*”
- Hook: introduce a phenomenon or question that motivates today’s concept.

Core (20 min)

1. **Design share (10 min).** Each student shows their magic-square art. Brief explanation of the math.
2. **Summative quiz (25 min).** Magic constant formula, stair-step algorithm, historical context. See `quizzes/summative.md`.
3. **Critical-thinking close (5 min).** “*What’s the most enduring lesson from this module? Is it the math (algorithm), the history (Nārāyaṇa, Khajuraho), or the cross-cultural insight (magic squares everywhere)?*” Each student writes 2 sentences.
4. **Linkage.** Module 15 (Capstone) — magic-square art is one of the project options.
5. **Module close.** “*Designing your own magic square required CHOOSING constraints. What other constrained-design problems are like this?*” (Sudoku, crosswords, music composition, architecture.) Open discussion.

Activity (15 min)

A scaled version of *Class 3×3 Magic-Square Tournament* (see `activities/`). Today’s slice: focus on the part of the activity that reinforces Final Share and Assessment.

Wrap-up (5 min)

- One-sentence exit ticket: “*What’s one thing you learned today?*”
- Preview tomorrow.

Homework

(See `homework.md` for today’s task.)

Differentiation

- **Extension:** offer one open question or extra problem for fast finishers.
- **Support:** pair students who need scaffolds; offer partial outlines.

Teacher notes

- Citations: at least one quoted verse with citation per module. Day 1 already includes one if applicable; you may add more.
- Connect to prior modules where natural (especially Module 2 pañcabhūta).

Writing Prompts

Writing Prompts — Magic Squares — Bhadragaṇita (Senior)

Use these for in-class writing, homework, or assessment. Each prompt is suitable for a 300-word response.

1. In 3–4 sentences, explain Magic Squares — Bhadragaṇita to a friend who hasn't taken this module.
2. Choose one Sanskrit term from this module. Define it, then describe one observation from your own life that matches.
3. Compare Magic Squares — Bhadragaṇita with a similar concept from another module or from your science textbook. What's similar? Different?
4. Identify ONE claim in this module that you'd want to test. How would you test it?
5. What was the most surprising thing in this module? Why did it surprise you?
6. Pick one source cited in this module. Write 2 sentences explaining why it matters.
7. What is one common misconception about Magic Squares — Bhadragaṇita? Rebut it in 2–3 sentences.
8. Imagine you are teaching this module to a younger student. What would you say first?
9. Read one primary-source passage cited in this module. Translate or paraphrase it; comment on what it adds to your understanding.
10. Identify a contemporary debate about the IKS framework presented here (e.g., is Tirthaji's mathematics genuinely Vedic? are doṣas a valid framework today?). Take a position with two pieces of evidence.

How to use

- Pick **one** prompt per day for the writing-prompts homework.
- Or assign all of them across the module, alternating between in-class and home.
- Senior students may treat any prompt as a 500-word essay topic.

Homework

Homework — Magic Squares — Bhadragaṇita (Senior)

Light daily tasks. Each takes 10–15 minutes.

1. **Day 1 — Discover the 3×3** · Write 2 sentences about today's concept. (~10 min)

3. **Day 3 — How Many 3×3 Magic Squares?** · Write 2 sentences about today's concept. (~10 min)
4. **Day 4 — Stair-Step Method (Nārāyaṇa)** · Write 2 sentences about today's concept. (~10 min)
5. **Day 5 — Practice — 5×5 and 7×7** · Write 2 sentences about today's concept. (~10 min)
6. **Day 6 — 4×4 and the Khajuraho Square** · Write 2 sentences about today's concept. (~10 min)
7. **Day 7 — Historical Context — Nārāyaṇa and Predecessors** · Write 2 sentences about today's concept. (~10 min)
8. **Day 8 — Cross-Cultural — Lo Shu and Dürer** · Write 2 sentences about today's concept. (~10 min)
9. **Day 9 — Design Your Own** · Write 2 sentences about today's concept. (~10 min)
10. **Day 10 — Final Share and Assessment** · Write 2 sentences about today's concept. (~10 min)

Notes

- Homework is intended to consolidate what was learned in class, not introduce new content.
- If a child struggles, the parent should consult the teacher rather than push.
- Capstone project days (Module 15) may have lighter daily homework so students can focus on the project.
