

module-07-eleven-multiplication - Darshana (60-min workshop)

IKS Curriculum - senior band

Module 7 — $\times 11$ Multiplication (Darśana)

Sanskrit: *Ekādhikena Pūrveṇa* · **Band:** Senior (9-12) · **Duration:** 60 min · **Path:** Darśana (Workshop)

Mental multiplication by 11 from 20th-century Indian arithmetic.

Darśana note. This workshop condenses Module 7's full 10-day arc into one hour. For the deeper version — daily lesson plans, quizzes, assessments, slide decks — switch to [Adhyayana](#) (the Full Course path).

Opening hook · 5 min

Project: $234 \times 11 = ?$ Pause. “*Long multiplication takes ~30 seconds. The Vedic Mathematics method takes ~5 seconds. Today we learn the method AND examine its honest historical claim — manuscript date 1911-1918, published 1965.*”

Core idea · 15 min

$\times 11$ mental method (Vedic Mathematics by Bharati Krishna Tirthaji, 1965).

Algebraic identity: $(10a + b)(10 + 1) = 100a + 10(a+b) + b$.

Procedure: 1. Split 2-digit number into a and b. 2. Cross-add: $a + b$. 3. Place: a, $(a+b)$, b. Carry if needed.

Extension to 3-digit: $abc \times 11 = a, (a+b), (b+c), c$.

Honest historical caveats: - Tirthaji's manuscript: 1911-1918. - Published posthumously: 1965. - Claimed source: a Parisistha of the Atharvaveda. **This manuscript has never been independently verified.** - Mathematician S.G. Dani (1993) critique: the methods are 20th-century arithmetic, not Vedic.

Use the method; teach the honest history.

Demonstration · 10 min

Algebra explainer + carry-case worked example. Derive $(10a + b) \times 11 = 100a + 10(a+b) + b$ on the board with the carry rule. Then demo $99 \times 11 = 1089$ (the most carry-heavy case). Discuss generalization to 3-digit.

Source moment · 5 min

Quoted reference. Tirthaji, *Vedic Mathematics* (1965), Sūtra 1 — *Ekādhikena Pūrveṇa*:

“By one more than the previous one.”

This is one of 16 sūtras. The phrase itself does not appear in extant Atharvaveda manuscripts. Treat as 20th-century synthesis.

Hands-on activity · 15 min

Historical-method critique. Each student writes 250 words on: “*Tirthaji’s $\times 11$ method works. Its claimed Vedic origin is unverified. How would you teach this honestly to (a) a curious child, (b) a sceptical adult?*”

Reflection + take-home · 10 min

“*This module taught you a technique and its honest historical context. How does separating method from origin claims serve mathematical education?*”

Go deeper into Adhyayana

The 10 days you’re skipping if you only do this workshop:

- **Day 01** — The $\times 11$ hook — what is the trick?
- **Day 02** — The carry case
- **Day 03** — Why it works — the algebra
- **Day 04** — 3-digit $\times 11$
- **Day 05** — Speed day
- **Day 06** — Anurūpyena extension to $\times 12$ -19
- **Day 07** — Limits of the method
- **Day 08** — Tirthaji 1965 and the historical claim
- **Day 09** — Mixed practice
- **Day 10** — Final assessment

→ **Open the Adhyayana track for this module** to access all 10 days, the 4-audience PDFs, the slide deck, the quizzes, and the project rubric.
