

Day 7 — Limits of the Method

Module: $\times 11$ Multiplication — Ekādhikena Pūrveṇa (Primary) · **Time:** 30 min

Goal

Recognise when traditional long multiplication is faster than the sūtra method.

Materials

- Notebook, pencils, drawing paper
- (See lesson-plan.md for any day-specific materials)

The flow

Settle + chant (3 min)

Daily chant or breathing exercise.

Story recall (4 min)

Briefly recall yesterday's lesson by asking: “*What's one thing you remember from yesterday?*”

Today's idea (10 min)

- *Ekādhikena Pūrveṇa* (IAST: Ekādhikena Pūrveṇa; lit. ““by one more than the previous” — sūtra 1 in Tīrthajī”)
- The trick is special! It works best for $\times 11$ (and $\times 12$).
- For things like $\times 23$ or $\times 47$, the trick is hard. Then we use the regular way.

Show: 23×47 . “*Would the trick work?*” (No — 47 is too far from 10.) “*So we do it the long way.*”

Children practice both methods on 24×11 vs 24×23 to feel the difference.

Activity (8 min)

A simplified version of *Mental Math Sprint Cards* (see [activities/](#)). Draw, sing, or act it out.

Wrap-up (3 min)

Each child shares one word that describes today.

Homework

(See [homework.md](#).)

Teacher notes

- Citations belong in teacher notes only, not in student-facing material at this band.
- Keep new Sanskrit terms to one per lesson, repeated several times.
- If energy is low, swap the activity for free drawing.
