

Day 2 — Axial Tilt and the Seasons

Module: Movement of the Sun (Primary) · **Time:** 30 min

Goal

Demonstrate with torch+globe why we have summer and winter.

Materials

- Notebook, pencils, drawing paper
- (See lesson-plan.md for any day-specific materials)

The flow

Settle + chant (3 min)

Daily chant or breathing exercise.

Story recall (4 min)

Briefly recall yesterday's lesson by asking: *"What's one thing you remember from yesterday?"*

Today's idea (10 min)

- *Uttarāyaṇa* (IAST: Uttarāyaṇa; lit. "northward solar course (Dec 21 – June 21)")
- Why do we have seasons?

Demo: hold a ball (Earth) tilted to one side. Shine a torch (Sun) at it. Move the ball around the torch. - Sometimes the TOP of the ball gets more light → summer. - Sometimes the BOTTOM gets more → other hemisphere's summer.

"Earth is TILTED. That's why we have seasons!" Children draw a tilted Earth with the Sun.

Activity (8 min)

A simplified version of *Sunrise Direction Tracking* (see activities/). Draw, sing, or act it out.

Wrap-up (3 min)

Each child shares one word that describes today.

Homework

(See homework.md.)

Teacher notes

- Citations belong in teacher notes only, not in student-facing material at this band.

- Keep new Sanskrit terms to one per lesson, repeated several times.
- If energy is low, swap the activity for free drawing.
