

Day 2 — The Magic Constant

Module: Magic Squares — Bhadrageṇita (Primary) · **Time:** 30 min

Goal

Derive why 3×3 with 1–9 must sum to 15 per row.

Materials

- Notebook, pencils, drawing paper
- (See lesson-plan.md for any day-specific materials)

The flow

Settle + chant (3 min)

Daily chant or breathing exercise.

Story recall (4 min)

Briefly recall yesterday's lesson by asking: "*What's one thing you remember from yesterday?*"

Today's idea (10 min)

- *siddhāṅka* (modern coinage) (IAST: *siddhāṅka* (modern coinage); lit. "the common sum of all rows/columns/diagonals")
- The MAGIC NUMBER for 3×3 is 15. Why 15?

Add all the numbers from 1 to 9: $1+2+3+4+5+6+7+8+9 = 45$.

Spread 45 across 3 rows: $45 / 3 = 15$. So each row must equal 15!

For a 4×4 magic square (using 1 to 16), what's the magic number? - $1+2+\dots+16 = 136$. / 4 rows = **34**.

"There's a pattern!"

Activity (8 min)

A simplified version of *Class 3×3 Magic-Square Tournament* (see activities/). Draw, sing, or act it out.

Wrap-up (3 min)

Each child shares one word that describes today.

Homework

(See homework.md.)

Teacher notes

- Citations belong in teacher notes only, not in student-facing material at this band.
- Keep new Sanskrit terms to one per lesson, repeated several times.
- If energy is low, swap the activity for free drawing.
